(54) Title: A FLUID DISPENSER

(57) Abstract: A fluid dispenser (1) for dispensing a metered volume of a fluid product (2) having a storage chamber (57) for storing the fluid product in; a dispensing outlet (27) through which the fluid product is dispensable from the dispenser; a metering chamber (73) which is adapted to provide the metered volume of the fluid product for dispensing through the dispensing outlet by movement of the metering chamber between a contracted state and an expanded state, movement of the metering chamber from the contracted state to the expanded state placing the metering and storage chambers in fluid communication to enable the metering chamber to receive from the storage chamber an excess volume of the fluid product comprising the metered volume and a surplus volume; a bleed arrangement (55a, 55b) adapted to bleed the surplus volume of the fluid product from the metering chamber; and an actuating mechanism (100) for actuating movement of the metering chamber between the expanded and contracted states. The actuating mechanism has a manually-operable actuator member (101) mounted on the dispenser for movement in a predetermined direction with respect to the dispenser. The actuating mechanism is adapted to cause a cycle of movement of the metering chamber which takes in its expanded and contracted states in response to movement of the actuator member in the predetermined direction.
